

# Cancer Test

Here's the info on the more sophisticated HCGH test:

The sophisticated test was developed by a Philippine Dr. Manuel D. Navarro in the late 1950's! His son, Dr. Efren Navarro, continues to analyze the test results. The test is called the "HCG Urine Immunoassay."

This HCG test can find cancer 12 to 27 months before other kinds of testing depending on the type of cancer.

When I checked into this two years ago, the test cost about \$50. To find out more, call Erlinda Suarez at (847) 359-3634.

The address is 631 Peregrine Dr., Palatine, IL 60067.

The turnaround time for the test is about 10 days.
