

CLIENT FAQ & TIPS FOR USING THE BIOLOGICAL IMMUNITY ANALYSIS® SYSTEM (BIAS)

Updated: 031721

1. Register for your free online BIAS account at: <http://registration.biri.org>
2. The BIAS works on a prepaid basis. You receive 3 free tests to become acquainted with the system. After that, you may refill your account by ordering here:
<http://reports-order.clk2.us>

When you order reports, make SURE you are choosing from the CLIENT LAB options and not the options available ONLY to CERTIFIED BIA® PRACTITIONERS. You have two report options available to you depending upon the quantity you order.

3. Using the BIAS will save you much money as you learn to interpret the BIA® results for yourself. In the beginning, you can monitor your Metabolism Efficiency (EM) on the Energy Categories Report. If it is improving, you don't need to talk to me, just keep doing what you are doing – it is working. If it is decreasing, you need to schedule a consultation with me unless you believe you know what you need to do to turn it around.
4. Wait for confirmation of your account opening. This might take 24 hours.
5. Use <http://doctor.biri.org> to login to your Client Files.
6. At a minimum, you should complete the following tabs. The more the better:

CLIENT DATA
GENERAL SYMPTOMS
BIA TEST

It is helpful, but not required, for research purposes and a deeper analysis to also complete these tabs:

MEMGRAM QUESTIONNAIRE
BIA QUESTIONNAIRE

See BIAS-CLIENT FAQ & TIPS here. Check regularly for updates:

<https://www.biri.org/pdf/forms/BIAS-Tips-Client.pdf> or <http://bias-client-tips.clk2.us>

7. To enter the RBTI numbers on the BIA® Test tab, you must click EDIT in order for the data boxes to appear.
8. When entering the ORP when you are entering test data, be sure to add the + or – before the number. Sometimes you have to move the cursor to the left inside the box before typing. This is a bug of unknown origin at this time.

I prefer this meter: https://www.amazon.com/American-Marine-Pinpoint-ORP-Monitor/dp/B0149K6A6O/ref=sr_1_2?ie=UTF8&qid=1486923136&sr=8-2&keywords=ORP+meter

9. Use <http://reports.biri.org> to login to generate your Reports
10. Use <http://reports-order.clk2.us> to replenish your BIAS account.
11. When creating a new record, you usually want to answer YES to carry forward the data from previous record or you will not have the BIA® Questionnaire data to assist you on subsequent records.

Once you have a record without BIA® Questionnaire data, you will never be asked this question again for future records for this client.

When sufficient time has passed, and you want to enter a new BIA® Questionnaire data, you can always enter new BIA® Questionnaire data on any new record and decide how long you want to carry forward that new data into future records for that client.

If you want to restore your ability to carry forward existing BIA® Questionnaire data you must delete all records that do not contain BIA® Questionnaire data and then create new records, being sure to answer YES to the option to carry forward data to any new record you create.

12. There is one problem with entering past test data on the same day. When selecting a test for reports, the disadvantage of entering past tests all on the same day is that they all carry the same date which makes it harder to ascertain the order of the tests, which requires you to look at the file #'s to determine the order of the test dates.

So, select the most current test for a report and you will get a test history page for all previous tests unless you answer YES to only giving you the last 8 tests.

If you do want the individual reports for each of the previous tests you can select each one individually and generate the reports.

13. You may generate as many individual reports for each test as you want. They all count as one report as long as they are for the same test. When you select a different test to report, you will have one report deducted from your BIAS account.
14. You receive 3 Free Reports. After that, they are \$10 or \$6 each.
15. When you delete a test record, you must logout/in to reset your Client File.
16. If you are testing family or friends, to enter the data, select NEW CLIENT so the server can keep your tests separate from the family member or friend.
17. On ALL meters you never turn it on before rinsing away the storage solution. You NEVER want to contaminate the specimen with a storage solution. And, you NEVER want to contaminate your storage solution with a specimen solution. You always rinse/dry prior to testing and you rinse/dry after testing.
18. EM = Metabolic Efficiency | Energy from Metabolism | Metabolic Energy
ER = Reserve Energy, | Energy in Reserve | Immunity
BA = Biological Age, | How old the body thinks it is | Premature Aging Factor
AR = Adverse Relationships | Balance Factor | Stress Factor
SD = Speed of Decline | How fast the body is falling apart | Inertia Rating
19. The ORP Meter will sometimes change drastically and then slow to a crawl but keep changing the display every few seconds. How do you know when to stop? I start the test when I set the 4-minute timer for the Nitrate Nitrogen test. When I am ready for cleanup, I take the ORP reading, turn off the meter, rinse the probe and place it back in its storage solution. Remember to calibrate this meter at least monthly or if you move it from one temperature to another.
20. The Salts number is always rounded up to nearest whole number.
21. The pH number is always rounded up to the nearest #.# number, i.e., 6.5
22. Using the Dist-4 Salts Meter – the top # is the Salts reading. You must divide by .7 to get the final BIA® Salts number. The bottom number on the screen is the temperature – no use to us.
23. When you create your Client Record, to enter subsequent tests, you do NOT create another NEW CLIENT record. You access your ORIGINAL CLIENT RECORD, then you select the BIA tab, then NEW TEST, and enter your new test data. This way, all of your tests are under ONE CLIENT NAME – You.

24. If you want to create a Client Record for a family member, you would select NEW CLIENT and enter their data so they have their own client data, and add their tests to their Client Record just as you have done for yourself, in #23 above.
25. Prepare a Balance Chart for any test which you want me to consult with you. You should be doing a Balance Chart for all tests. This will help you understand the numbers.
26. Print at least the Energy Categories Report and Test History for retests for which you desire a consult.
27. Print at least the following for first tests for which you desire a consult:
 - Energy Categories
 - Tendencies
 - Ratios & Zones
 - Additions | Deletions
 - Prepare a Balance Chart
28. It has been brought to my attention that there is confusion regarding how to drop the NN and NN drop into the well plate. The instructions state to drop them in a 12-3-6-9 o'clock pattern. I have found that it is best to simply drop all 4 drops into the center of the well, plopping into the one drop you already have there, from about 2 inches high so the plop creates a mixing motion in the well.
